

# FedRAMP Compliant Websites powered by CMS Tools from Drupal, Joomla! and WordPress

**U.S. federal, state and local government agencies that need a highly secure website and CMS (Content Management System) platform can rely on our **FedRAMP compliant** SaaS clouds that have been authorized at the **Moderate, High, and DoD CC SRG IL 4/5** levels:**

- **Drupal FedRAMP Website / CMS**
- **Joomla! FedRAMP Website / CMS**
- **WordPress FedRAMP Website / CMS**

We're Project Hosts, a CSP (Cloud Services Provider) with a FedRAMP Agency ATO (Authority To Operate) for our Federal Private Cloud (FPC) for Windows and Linux applications. Our FPC includes a wide variety of ready-to run applications and tools that are FedRAMP authorized, including website content management systems from the most popular providers.

If your agency needs to build and maintain a FedRAMP compliant website and database using Drupal, Joomla! or WordPress, we have what you need. Unlike FedRAMP IaaS-level compliant website offerings, where you still have to put in place and manage all of the scanning, patching, log correlation, intrusion detection, incident response and other security services required for FISMA compliance, our FedRAMP SaaS-level authorized websites allow you to just focus on your website content development and leave all the security and operations to us.
